How to Export/Back-Up a Digital Certificate Using Google® Chrome

To export/back-up a digital certificate using Google Chrome, follow the below instructions:

1. Open the **"Start Menu"**.

2. Type in **"Internet Options"** in the search box.

3. Click on the tab **"Content"**.

4. Click on the button **"Certificates"** and be in the tab marked **"Personal"**.

5. Select your certificate and click on **"Export"**. Then click **"Next"**.

6. Be sure to select **"Yes, export the private key"** and click **"Next"**.

7. Check the boxes **"Include all certificates in the certification path if possible"** and **"Export all Extended Properties"**. Then click **"Next"**.
    Warning: Do NOT select "Delete the private key if the export is successful".

8. Create a new **"Password"** of your choosing; this is case sensitive. Then, re-enter the **"Password"** to confirm and click **"Next"**.

9. Click on the **"Browse"** button. Here you can select where you want to save the export and give the certificate a name. Then click **"Save"**. Then click **"Next"**.

10. Click **"Finish"** and if you are asked to click on **"OK"**, please do so.

11. If prompted for a password, then enter your password that you normally use for the certificate.
